

Flygt low-speed mixers

Outstanding efficiency

Engineered for life

Energy-efficient mixing

Rising to the mixing challenge

All mixing applications require varying degrees of both small-scale turbulence and bulk flow. With a good bulk flow, the contents of the entire tank are put into motion so that all parts are involved in the mixing. The strength of the bulk flow is, in turn, dependent on the total amount of installed thrust and layout.

Unparalleled expertise, broad mixing solutions

ITT pioneered the use of thrust as the main performance parameter for mixing. And every day, we put more than 50 years of R&D expertise and practical experience to work to determine the right technology, mixer size and layout for your requirements.

Our comprehensive portfolio of mixers and agitators cover virtually every requirement. Hundreds of thousands of Flygt mixers and agitators are in service worldwide, delivering efficient mixing performance.

Low-speed mixing

When mixing and horizontal flow is essential for biological wastewater treatment processes, Flygt low-speed mixers deliver outstanding cost-effective performance for applications that involve gentle mixing of large fluid volumes.

Engineered for more efficient bulk flow, lower energy consumption and positioning flexibility, these mixers offer highly efficient solutions for a wide range of mixing applications, such as:

- Activated sludge treatment
 - Conventional treatment
 - Oxidation ditch
 - Sequencing batch reactor
- Wastewater reservoirs
- Ice prevention
- Oxygenization in lakes and harbors

Advantages of Flygt low-speed mixers

- Outstanding reliability
- Strong bulk flow
- Extreme energy efficiency
- Easy to service
- Lean installation
- Highly versatile for most tank sizes
- Low total cost of ownership

Our comprehensive mixing portfolio

ITT's wide array of reliable, trouble-free mixing equipment includes;

- Flygt low-speed mixers
- Flygt compact mixers
- Flygt top-entry agitators
- Flygt jet mixers
- Flygt hydroejectors

Designed for high reliability

For decades, ITT has been at the cutting edge of research and development to improve mixer technology. Flygt low-speed mixers feature several components that contribute to reliable operation and reduced energy costs.

Energy-saving propeller

Our unique propeller design maximizes the amount of thrust delivered while minimizing energy consumption. Engineered for hydraulic excellence with high-strength materials, our signature banana blade large-diameter propellers with backswept self-cleaning design provide non-clogging performance that lasts and lasts.

The Flygt banana blade propeller creates maximum thrust using minimal power.

Dependable Class H motor

Our squirrel-cage induction motor is carefully manufactured at our own premises for durability and dependability. Stator windings are trickle impregnated in resin and rated at Class H 180°C (355°F) to provide excellent resistance to overheating and exceptionally long service life.

Stator windings are rated at Class H for exceptional resistance to overheating.

Reliable shaft seals

A vital component for reliable operation, Flygt mechanical shaft seals feature a unique design with an intermediate barrier fluid. Made of corrosion-resistant tungsten carbide (WCCR), our specially manufactured seals provide exceptional mechanical strength and superior sliding properties. This results in significantly less wear between the seal surfaces. It also reduces the risk of leakage and prolongs seal service life.

Unique mechanical shaft seal demonstrates superior sliding properties and exceptional mechanical strength.

High reliability in every detail

1 Cable entry

Compressible bushing and strain relief on the cable prevent leakage into the motor.

2 Motor

High-performance, squirrel-cage induction class H-motor provides thermal overload protection and extra long service life.

3 Protective coating

Durable, high-strength top coating protects cast-iron parts against impact, chemicals and corrosion.

4 Monitoring

Thermal sensors embedded in the stator windings prevent overheating. Leakage sensors are available as options.

5 Inner shaft seals

Shaft seals between stator and gear box, and between gear box and seal housing.

6 Gear box

Designed for years of trouble-free operation.

7 Seal housing

Seal housing containing barrier fluid, which lubricates and cools the seal and thereby prolongs service life.

8 Outer shaft seal

Mechanical shaft seal between surrounding liquid and seal housing has mechanical locking device to secure the seal position. This makes the seal reliable as well as easy to assemble and disassemble.

9 Propeller

Thin-sectioned, double-curved blades with a unique design for maximum efficiency and clog-free operation.

The best way to dependable, low-cost installation

The Flygt installation equipment is rigid enough to withstand the weight and reaction forces exerted by the mixer throughout its operating life. It is also robust and easy to work with.

Guide bar systems for any tank

To help withstand fatigue from strongly fluctuating forces within the tank, Flygt low-speed mixers are installed along rigid guide bars at appropriate depths for optimal mixing efficiency. Used together with our lifting equipment, guide bar systems enable easy access for inspection and service.

Safe, convenient lifting equipment

Raising and lowering Flygt low-speed mixers with our lifting equipment is as easy and convenient as it is safe. The CE-approved lifting davit is mounted in a holder at its lower end which enables easy turning of the davit. To reduce investment cost, one davit can be used wfor several mixers.

The guide bar system makes mixers easily accessible.

No costly modifications to existing tanks are required.

A broad range of low-speed mixers

Our low-speed mixer portfolio comprises three modular Flygt models that provide comprehensive mixing performance. By combining different motors, gear ratios and propeller diameters, you can customize Flygt low-speed mixers to meet your specific process needs.

Facts and figures

Model	4410	4430	4460
Shaft power			
· 50 Hz, kW	0.9	2.3	4.3
· 60 Hz, kW (hp)	1.1 (1.5)	2.6 (3.5)	4.6 (6.2)
Thrust range			
· 50 Hz, N	200–1,400	400–2,100	500–3,600
· 60 Hz, N	300–1,400	600–2,300	700–3,800
Propeller diameter, m (in)	1.4–2.5 (55–98)	1.4–2.5 (55–98)	1.4–2.5 (55–98)

Options

SUBCAB®

Heavy-duty submersible rubber cable.

SUBCAB® Screened

Heavy-duty submersible rubber cable for use with VFD and to limit electromagnetic interference.

Special cables

Withstand high temperatures, high voltage and chemical agitation.

Leakage sensors

Automatically detect, together with external monitoring equipment, any leakage in stator and oil housings.

Flygt MiniCAS supervision

Provides quick and easy equipment protection by monitoring

thermal overload switches and leakage detectors.

Explosion-proof versions

For use in potentially explosive or flammable environments.

Extra durable coating

Provides extra protection against anodic corrosion by means of a zinc-rich epoxy primer and three-layer top coating.

Silicon carbide (RSiC) seal

Provides excellent abrasion resistance and superior resistance against acid and chloride liquids.

Zinc anode kits

Provides extra corrosion-resistance for seawater applications.

Stator leakage sensor

Flygt MiniCAS supervision unit

Cross section of Flygt epoxy coating

3 layers of top coating

Zinc-rich epoxy primer

Blasted cast iron

A perfect blend of support and service

Boost efficiency with monitoring and control

We supply everything from controllers, sensors and start equipment to SCADA software for complete fluid handling supervision.

A deep understanding of fluid handling and vast experience in mixing technologies make ITT a trustworthy and reliable partner for your wastewater process requirements.

Systems engineering expertise

Dimensioning and layout are critical factors in maximizing performance. Using our expertise and intelligent tools, we analyze your requirements to identify the right mixer or agitation system to optimize your processes.

Support along the way

Our recommendations result from the use of specially developed and validated Computational Fluid Dynamics software programs, based on carefully selected, relevant models. Our own testing facilities as well as field testing and measurement of actual performance onsite provide ITT engineers with keen insight into what works. Using this knowledge and expertise, we help you maintain your installation in top operating condition.

Global service network

Should any problem occur with your Flygt mixers and agitators, professional assistance and original spare parts are always within easy reach through ITT's extensive service network in 140 countries.

Enjoy the benefits of a premium brand

Genuine spare parts are vital to ensure long and trouble-free operation. We guarantee the availability of spare parts for 10 years after we stop production of a model.

What can ITT Water & Wastewater do for you?

ITT Water & Wastewater is a global provider of water handling and treatment solutions for municipal and industrial customers in more than 140 countries. ITT designs and delivers energy-efficient solutions and related services for water and wastewater transport, biological treatment, filtration and disinfection. The company employs nearly 5,000 people through its global sales network, manufacturing sites in Europe, Asia and the Americas, and global headquarters in Stockholm, Sweden. ITT Water & Wastewater is a business of ITT Corporation, a high-technology engineering and manufacturing company operating in three vital markets: water and fluids management, global defence and security, and motion and flow control.
