Wastewater treatment system technology

We provide clear water

No mechanics
in the wastewater

No pumps
in the wastewater

No electrical parts
in the wastewater

More than 225,000 user in over 34 countries trust in KLARO

Marketleader for SBR systems with air-lift pump technology

KLARO-production-system:
Standard products available from stock within 24h

The KLARO principle Maximum operating reliability!

No mechanics, pumps or electrical parts in the wastewater!

All components are permanently fixed to the septic tank. All handling processes take place through the air-lift pump. The oxygen supply is fed through membrane ventilation, which is mounted on stainless steel manifolds. All electrical parts are located outside the container in a secure control box.

Our benefits

- TÜV-tested switch cabinets
- Almost all possible approvals
- Extremely short delivery times thanks to optimised production
- Legal threshold values undercut by up to 90%
- 98% treatment performance in 6 hours
- Certified underload detection
- Fully-biological mode of operation
- Quality products, with extremely high customer satisfaction levels
- Minimal power consumption
- All transportation processes performed by air-lift pump
- Treat water and introduce it back into the natural cycle
- Only one tank required for systems of up to 20 PE (Personnel Equivalent)
- Suitable for retrofitting to practically any tank shape
- Retrofitting possible in single, twin, triple and multi-chamber pits
- Installation possible in any type of tank, from plastic to fibreglass to concrete

Experience and competence in wastewater treatment systems!

Be it for a single household, communal facilities,
communities, hotels and restaurants, ...
